Charles Faram strongly recommends forward contracting your hops so we offer a forward contract service that allows you to order secured stock throughout the year. Visit www.charlesfaram.com for more details.

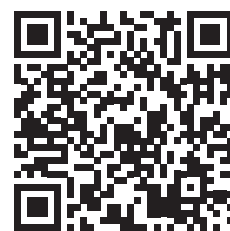

It's a well-known fact that the tastes and fashions of beer change, and the thirst for a more varied beer experience and education is growing. In line with this, we have our own Hop Development Program, cultivating hundreds of new seedlings each year in our quest to find Your Next Hop Variety. We want to help brewers create great beer so our hops have to inspire you and bring something new. We also want vibrant, healthy hops which support our growers.

So, this is your opportunity to take part in the British Hop Development Programme and to help guide it. If you've brewed with one of its graduates (listed further down this page) or one of our experimental CF-numbered hops, please keep providing us with your brewing feedback via this link or by scanning the QR code. Your participation is hugely valued.

“ We've used English hop varieties Olicana and Jester from CharlesFaram for our first brew. Damn, big hits of grapefruit and orange peel coming through already. Biggest hitting UK hops I've experienced so far.

We've just had the first taste of trial number 1 we are pleased with this as a starting point. Peaches on the front end, floating on smooth pillowy goodness drifting into tangy orange and grapefruit from the Olicana & Jester hops from CharlesFaram

– Trig Point Brewing

“ A cask World Exclusive became our biggest seller yesterday. Golden Jester is EB's latest blonde, hoppy number. Lots of English Jester hops give a less aggressive, more subtle fruity note when compared with new world varieties.

– Owl & Pussy Cat W13

“ With our new pilsner, Acapella, we wanted to make something that showed off how well the pilsner style can showcase hops. First Gold adds orange pith and resin, while the Archer adds a floral note.

– Yonder Brewing

The aroma and flavour of a hop helps the brewer to select the varieties to use in each style of beer.

Alpha %: Alpha acid is the measurement brewers use to calculate the amount of hops needed to achieve their target bitterness.

Cohumulone % (one of the main alpha acids): Low Cohumulone generally gives a smoother bitterness. High Cohumulone is a crisper, sharper bitterness.
